

NovusMED Driver

THE ALL-IN-ONE IN-VEHICLE NEMT APPLICATION

Momentm's NovusMED Driver is a new all-in-one application in which performance data, bill automation, and real-time tracking are available for organizations in the NEMT ecosystem.

WHAT IS NovusMED Driver?

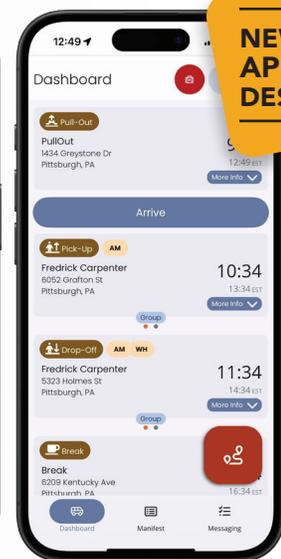

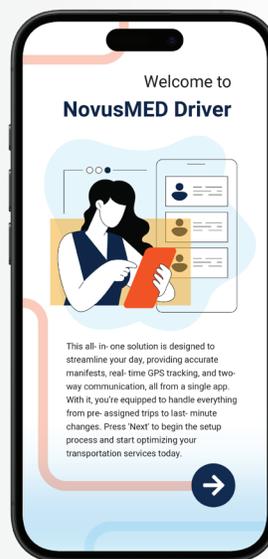

Momentm's NovusMED Driver is the new, in-vehicle application for organizations to manage their NEMT ecosystem in real-time. The beauty of this new application is that drivers will have accurate manifests, receive last minute trips, access to accurate locations of vehicles and passengers, and that it offers billing and safety performance data all in a single integrated application.

KEY FEATURES:

- Compatible with iOS and Android devices and requires no configuration.
- Enhance driver safety and performance with Google or Waze maps for detailed trip directions and traffic levels.
- Pre-assign trips and send information to drivers.
- Real-time management of fleet and runs, enhancing staff and passenger experience.
- Provide two-way communication between dispatch and drivers, improving efficiency and protecting passenger confidentiality.

WHAT NovusMED Driver DOES FOR YOU?

- Performance data is collected automatically and accurately allowing for efficient reporting and billing.
- Performance and billing automation reduces time and cost spent, and dispatchers can manage fleet and runs in real-time.
- Real-time management of your vehicles and seat inventory.
- You can track, monitor, and communicate live to ensure quick and quality outcomes.

WHO USES NovusMED Driver?

One of the key factors of NovusMED Driver is that all segments in the NEMT ecosystem benefit from its features: Brokers, Providers, MCO's, and PACE organizations.

The application can be deployed in two ways: Managed Mode and 3rd Party Mode.

Managed Mode is meant for companies that have their own drivers and vehicles, who need to stay in touch and have deeper control of the days' route.

3rd Party Mode is available for subcontractors who perform trips on behalf of the company and need to provide visibility and transparency to stakeholders regarding how trips are progressing. If you operate both models in your business, a tenant for each mode will be made available to you upon deployment.

Managed Mode:

- You can see a fully routed manifest and perform assigned work.
- You can see all vehicles on a map, send two-way messages, and dynamically synchronize manifest changes throughout the day for each individual driver.
- Have drivers perform key compliance checklists at the beginning and end of each shift.

3rd Party Mode:

- Allow brokers to receive real time location data and trip completion data from providers.
- Allow providers to easily pre-assign trips to drivers and vehicles.
- Allow drivers to view and perform assigned trips.
- Allow drivers to review and accept available trips.
- Allow drivers to mark themselves as "available" or "unavailable" to assist in trip assignment.

Momentm is a dedicated Health & Human Services Transportation software company, emerging with 30+ years of prior experience from TripSpark and Trapeze. This new brand is a reflection of our commitment to addressing a key social determinant of health (SDOH), namely non-emergency medical transportation (NEMT), for many market segments including Managed Care Organizations, brokers, transportation providers, PACE, IDD and health groups.

Our market leading expertise is well-known, and now we are truly building Momentm together with you.
